Summary

I am a passionate Software Tester with a strong foundation in web. I have experience in functional non-functional testing, including performance and load testing, to ensure application quality and reliability. My development background helps me understand system architecture, identify defects efficiently, and collaborate effectively with development teams. I am motivated to deliver high-quality, scalable software solutions while continuously enhancing my testing and development skills.

Testing Skills

- ➔ **Functional Testing:** Test case writing, requirement analysis, bug reporting
- ➔ **Non-Functional Testing:** Performance testing
- ➔ **Automation Testing:** Selenium, playwright (basic)
- ➔ **API Testing:** Postman
- ➔ **Performance Testing Tools**: k6, Grafana Cloud

Development Skills

➔ **Front-End Development:** ReactJs, Nextjs Redux, Axios
➔ **Back-End Development:** Node.js, Express.js, mongoose
➔ **Database Management:** MongoDB, MySQL
➔ **Authentication:** Firebase, JWT, Axios Interceptor
➔ **Hosting & Deployment:** Vercel, Netlify
➔ **Programming Languages:** JavaScript, python, C++
➔ **Tools:** Figma, Canva, Visual Studio Code

Project Highlights

360 Pathshala || E-Learning Platform|| Manual Testing || 13, April 2026 - 13, April 2026

GitHub

This QA report documents the manual testing execution of the Authentication functionality of 360Pathshala. The testing focused on identifying functional defects, validation issues in both Registration and Login flows.

NopCommerce website automation using selenium || Maven || December 2025 - Present

GitHub

Developed end-to-end automation for the NopCommerce demo website using Selenium WebDriver with Java and Maven (December 2025 – Present). Implemented Page Object Model for maintainable code, automated login, product search, and cart functionalities, integrated TestNG for test management, and performed validation with assertions, ensuring reliable and scalable web application testing.

AI Professor || Performance Testing Using K6 || November 2025 – December 10, 2025

GitHub

I executed comprehensive K6 performance testing on Student and Teacher dashboards, covering Smoke, Load, Stress, Spike, Soak, and Breakpoint scenarios. It verified a 1,000-user capacity, identified a 1,200-user breaking point due to infrastructure bottlenecks, and provided actionable recommendations to resolve data validation failures and optimize system scalability.

Education

Daffodil International University | Dhaka, Bangladesh | Expected Graduation: April 2026

- ➔ B.Sc. in Computing and Information System (Major: AI in IoT) | CGPA: 3.94

Recognition

HULT Prize – DIU Champion and World Semi Finalists || 2023

Winning the Hult Prize DIU 2023 and advancing to the World Semifinals was my most significant achievement, showcasing our team's success in the prestigious international competition.

NASA Space Apps Challenge || 2024

Where I worked on developing a web-based application to compare ground-based spectral measurements with Landsat Surface Reflectance (SR) data. And our team selected for final round.
